

A Universal Antidote and Other Useful Information

M. G. "Oggi" Cohen, Identifying Reality for 80 Years

Product Names: MMS, CD, CDS, ClO₂: All are Chlorine Dioxide (ClO₂) but are produced using different activators:

MMS (Miracle Mineral Solution): The combination of Sodium Chlorite (NaClO₂) activated with 50% citric acid.

CD (Chlorine Dioxide): The combination of Sodium Chlorite (NaClO₂) activated with 4% hydrochloric acid.

CDS (Chlorine Dioxide Solution): The solution in water of either MMS or CD.

Not to be confused with either Sodium Hypochlorite (Bleach) or Chlorate!

The developer of MMS is Jim Humble; the developer of CD is Andreas Kalcker. "CD is much milder and efficient than ... MMS ... and it barely causes any side effects ..." Kalcker, Andreas. *Forbidden Health*, Voedia, 2018, p.40.

Both forms are effective and inexpensive, *and (therefore) recently have been aggressively suppressed*. (Red pill warning: The balance of *pros* vs. *cons* found on the internet will depend on the bias of your search engine.)

CD is legal to use in the US as a disinfectant and water treatment. It is not FDA-approved as a therapeutic, though it is a component of many health- and cosmetic-related products. NASA declared it a universal antidote in 1987.

Dr. Kalcker's directions for dilution and use of CD may be found in his book *Forbidden Health* ©2018:

Here's a comprehensive video, with accompanying *Interactive Reference Guidebook* and *Beginner Training Guidebook*, about the history, efficacy, and safety of Chlorine Dioxide: [The Universal Antidote – The Science and Story of Chlorine Dioxide](#)

Twin-Oxide® is a commercial-quality packaging of two dry components (powders or tablets), which when mixed with water according to directions, generates highly concentrated pure Chlorine Dioxide. The concentrate from the powders is 3000 ppm. The concentrate from the tablets is 1000 ppm. (For most convenient use with a Berkey filter, I recommend the tablets kit.) **The concentrate must be diluted before use, to the strength appropriate for the intended use.** For water purification, "intended use" refers to the degree of contamination of the water to be treated, and the standard of purity to be achieved.

For more info or to purchase Twin-Oxide®, I highly recommend the US distributor, Dr. Joe Nieuwma:
